

Duplex powder coating

The solution for highly corrosive environments

The duplex powder coating is ideally suited for use in highly corrosive environments, such as swimming pools or other atmosphere with high chloride content.

A combination of galvanising and dual powder coating ensures high corrosion protection in such environments.

Benefits

- **Highly resistant surface finish:** Close-pored, abrasion-proof
- **High coating thickness:** Powder coating thickness between 120 and 160 µm
- **High corrosion protection:** Up to corrosion category C4 (DIN EN ISO 12944-2)
Note: The fields of applications of the products should be checked and approved by a specialist planner.
- **Versatile installations:** Can be combined with HCR steels (1.4529) and hot-dip galvanised mounting parts, particularly threaded parts, which are also coated with an epoxy resin coating on construction sites
- **Perfectly suited for visible and outdoor areas:** Individual and multifaceted colouring based on the RAL colour scale

MÜPRO is a fast-growing, international corporate group with subsidiaries and sales partners throughout the world. We are a leading solutions provider and premium supplier in the areas of fixing technology, vibration control and fire protection. Our products are "Engineered in Germany" – we have more than 50 years of industry experience in design and production. Today, MÜPRO products are used all over the world.

Our systems solutions offer high quality and cost efficiency. They are used in all building services areas as well as in industrial and plant technology. We also offer our customers a wide range of variable products produced on an order basis.

We offer support throughout the entire development, production and delivery process and provide our customers with technical drafts and project support on site. We reliably ensure the pre-assembly of modules, special packaging and deliveries as well as cost-saving storage options on site.

We also have many years of expertise in special areas of fixing technology such as cleanrooms, tunnels and fixing in the case of heavy loads. MÜPRO Maritim, with its headquarters located in Hamburg, specializes in fixing technology for the shipbuilding industry.
